Location: Kalutara, Sri Lanka

Summary

Full stack developer who builds and ships web products end to end, working in **React**, **Next.js**, **JavaScript** and **TypeScript** on the frontend and **Node.js**, **Java (Spring Boot)**, and **Python** behind REST APIs, backed by **MySQL** and **MongoDB**. Comfortable owning features from idea to deployment, with hands-on experience in **Docker** and CI/CD pipelines in **GitHub Actions**, and contributions to open source projects.

Experience

Full Stack Software Engineer Intern | WSO2, Sri Lanka

Feb 2025 – Jul 2025

Developed and maintained the **MIS Flash Report**, an internal financial dashboard used by WSO2's Finance Team to monitor Profit & Loss (P&L) metrics (including ARR, Expenses, Cost of Sales, etc.) across business units and global regions, built using **React**, **Ballerina** and **MySQL**.

- Engineered **ETL pipelines** integrating P&L financial data from **Salesforce** and **NetSuite** into **MySQL** for downstream reporting.
- Implemented comprehensive P&L reporting and subregion filtering, enabling the Finance Team to analyze complete financial metrics across global business segments for both annual and monthly views.
- Built a one click Excel report generation feature, automating the creation of full, annual, and monthly reports with separate sheets for each business unit.
- Worked directly with the Finance Team to gather and implement iterative requirements, operating in an **Agile/Scrum** cross-functional environment with peer code reviews.

Open Source Contributions

Wger – Open Source Workout Manager | *React* | [GitHub](#)

- Unified the exercise search UI with the ingredients UI, adding features like collapsible search options, local storage persistence, language filtering, category filtering, and exact name match search.

Nutrivigil - AI-Powered Nutrition Analysis Web Application | *React, Node.js, Generative AI* | [GitHub](#)

- Built voice input pipeline using Web Speech API with live transcription, auto-silence detection, and multi-lingual support.
- Enabled AI voice responses for voice-based health queries.
- Developed AI-driven healthy swaps suggesting safe food alternatives for unsafe dietary verdicts.

GroqTales – AI-Powered NFT Story Generator on Monad | *Next.js, Node.js, MongoDB* | [GitHub](#)

- Migrated the profile system from static mock data to a dynamic Web3 architecture, integrating MongoDB for real-time user stats and wallet-based identity using **Monad wallet addresses**.

Projects

CentralSync - Internal Resources Management System | *Spring Boot, React, React Native, MySQL*

A web and mobile application for managing the internal resources (employee laptops, monitors, keyboards, etc.) of a company. My contributions include:

- User Management Section: Implemented features for adding and verifying users, creating passwords, and managing user profiles with editable details.
- User Activity History Section: Developed a comprehensive history log to track and display user activities.
- Issue Reporting Section: Implemented features for users to report and manage issues related to inventory items, facilitating smooth issue resolution and tracking.

Pathwise – AI-Powered Career Coaching Platform | *Spring Boot, Next.js, MySQL, Generative AI*

- A web platform to help job seekers identify ideal career paths, analyze skill gaps, and prepare for interviews.
- The app provides personalized job recommendations, resume optimization, and interactive tools like an AI Interview Coach to support professional growth.

GitHub Repository Links: [Frontend](#) | [Backend](#)

Reportly – Report Workflow Platform with AI Assistant | *FastAPI, MySQL, Next.js, TypeScript, Docker*

A full stack web application for submitting weekly reports and routing them through a multi stage review process, with version history and a management dashboard.

- Built REST APIs for authentication, role based access, and dashboard aggregation, covered by 30 automated pytest tests.
- Implemented a review workflow across draft, submitted, approved, and needs correction states, with each submission saved as a recoverable version.
- Containerized the services with Docker Compose and deployed the application.

Sri Lanka Used Bike Price Predictor | *Next.js, Flask, Python, CatBoost, SHAP*

- A full-stack machine learning web application that predicts the market price of used motorcycles in Sri Lanka using bike details such as brand, model, year, mileage, and engine capacity.
- Built a Flask REST API with a CatBoost regression model and SHAP based explainability, integrated with a responsive Next.js frontend for real time predictions and feature impact analysis; containerized services with **Docker** and automated testing and image builds using GitHub Actions.

Morphologically Similar Plant Identification and Health Assessment | *Python, OpenCV, FastAPI, Flask*

A research based mobile application automating species identification and health assessment of morphologically similar Ayurvedic medicinal plants in Sri Lanka.

- Built a species identification pipeline for 14 single leaf species using handcrafted botanical features (notch, margin, venation), achieving 96.89% test accuracy and outperforming a MobileNetV2 deep learning baseline (94.67%).
- Developed a two stage health assessment pipeline (XGBoost classification and SVR regression) with an interpretable, feature level damage breakdown, achieving 95.71% classification accuracy and $R^2 = 0.67$.
- Built a FastAPI backend serving both models to a Flutter mobile app, with leakage safe evaluation and cross platform model serialization.

Education

B.Sc.(Hons.) in Information Technology

University of Moratuwa

2022 - 2026

Second Class Upper Division

G.C.E Advanced Level Examination

Panadura Balika Maha Vidyalaya | Z-Score: 1.65

2020

Skills And Interests

Languages: Java, Python, JavaScript, TypeScript, C

Backend & APIs: Spring Boot, Node.js, Flask, FastAPI, Ballerina, REST API Integration

Frontend: React.js, Next.js, Redux, Tailwind CSS, Material UI, Bootstrap, HTML5, CSS3

Mobile: React Native, Flutter

DBMS: MSSQL, MySQL, MongoDB

Testing: JUnit, pytest, Selenium, Cucumber, Playwright

AI-Assisted Development: GitHub Copilot, Claude

Tools: Git, GitHub, Docker, GitHub Actions, Figma

Hackathons

Idealize (2025) | *Inter-University Designathon | Semi-Finalist - Team BitBalance*

HackElite 1.0 (2024) | *Inter-University Ideathon | Semi-Finalist - Team VivalaCodes*

InspiHer-Tech V2.0 (2023) | *Programming Hackathon | Semi-Finalist - Team VivalaCodes*

Social Winter of Code (2026) | *Open Source Hackathon*

IEEE Xtreme 16.0 (2022) | *Global Competitive Programming Hackathon*
